

Energy Policy

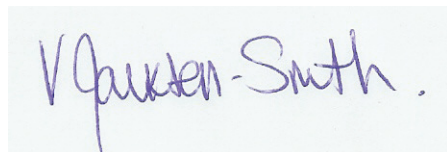

J&B Recycling would like to conserve energy in order to reduce operating costs and to minimise damage to the environment. We will endeavour to reduce our pro rata energy consumption by the use of best practice, modern engineering solutions and by encouraging the commitment of employees.

It is the intention of J&B to: -

- Ensure that staff, customers and suppliers should be made aware of our Energy Policy
- Adopt a whole life costing approach to purchases, where particular attention is paid to energy efficiency
- Reduce energy consumption, and thus, reduce carbon emissions
- Improve overall energy efficiency
- Engineer solutions for saving energy rather than rely solely on manual intervention
- Encourage and motivate employees to save energy
- Publicise these objectives
- Ensure all items identified in our action plan have been implemented
- Introduce energy conservation at the induction of new employees, customers and suppliers.

This energy policy will be reviewed regularly and will be updated to take into account changing circumstances and to ensure it provides opportunities for continuous improvement.

We give our full commitment to this initiative and would ask you to give your wholehearted support too.

Vikki Jackson-Smith
Managing Director
